Use of English (Part 2)

14	b	-
15	d	-
16	b	-
17	a	+
18	d	+
19	a	-
20	a	+
21	b	+

Writing

The recent development of new technologies bring something new to everyone's life, mostly something good. But have we ever thought how these technologies infect our freedom?

There are many freedoms that we guaranteed to have and one of them is freedom of speech, and I think, the Internet helps us to get it. What is the point of speaking when only few of more people are listening? In social networking sites you can shake your opinion on any topic to the whole world, but at the same time, moderation of most of the sites can just shut you up if they consider the topic inappropriate. Is it bad? Not really, it's their site, it's their rules after all. Sometimes dangerous opinions can influence unprotected people like children and they most likely will

take it as a truth. Sometimes our privacy can be disrupted with the help of computers and the Internet. This can lead to very undesired consequences as leaks of private information, loss of money, and even stalking or death threats. Nowadays, to stay private means being away from civilization, which is bad. Generally, new technologies disrupt our freedom, but can also be used to gain more of it. So I think these new technologies are good thing but should be used consciously and carefully. Either way, you can't stop progress after all.
